[Expansion]

Inauguration ceremony of new electrical component factory

Upgrading of headquarters

In line with the business expansion, facilities and equipment of the new electrical component factory and new automatic lathe factory etc. were upgraded. As the main section of the Nagoya factory which was flooded by the Isewan Typhoon had to be relocated to headquarters, the new factory for electrical components was completed at an astonishing speed of two and a half months from the start of construction. The equipment of the new automatic lathe factory were upgraded, and a factory that was considered as the ideal automatic lathe factory at that time was completed in August. In the following year, a 3-storey building made of reinforced concrete and the No. 6 factory to perform integrated production of plugs were built on the northern side of headquarters.

Completed new automatic lathe factory
