

## REMOTE SECURITY SYSTEM

DENSO is applying vehicle radar technology to security systems, using lasers to detect people and vehicles.

We've combined lasers with a pan-tilt-zoom (PTZ) camera to automatically record anyone within the range of the system. This can be used for security or to support business operations.

### What it does:

- ✓ Records vehicles or intruders and their actions
- ✓ Sounds an alarm to deter intruders
- ✓ Can be remotely controlled through a smart phone or tablet
- ✓ Notifies you of incoming customers

### How it works:
