

Biodiversity and DENSO

Did you know there are **multiple species** you could monitor from work?

Birds like robins, pigeons, or finches

Pollinators like bees, butterflies, or flies

Mammals like squirrels, deer, or skunks

Trees & Plants like roses, pine trees, or shrubs

Next time you're walking to and from your car, or walking around campus, take a minute to note the wide variety of species at your DENSO location!

Biodiversity is an indicator of environmental health and sustainability. The higher the species diversity, the better for that ecosystem.

DENSO supports biodiversity on our campuses through our **ecoparks** and use of **native & pollinating plants**.

DENSO is partnering with **Wildlife Habitat Council** to develop monitoring programs at our NA locations.

DENSO's Commitment

As a global company, we have an important responsibility to protect earth's environment. With more than **170,000 associates worldwide**, one-by-one, we can make a big difference. DENSO recognizes **World Environment Day** as a day to spark awareness and environmental action.
